锈毛苏铁 新种

Cycas ferruginea F. N. Wei, sp. nov.

Species valde insignis, foliis pinnatisectis elongatis usque ad 1.95 m longis, circ. 50 cm latis, petiolis et rhachidibus in juventute dense ferrugineo-velutinis, in maturitate sparse ferrugineo-velutinis vel glabrescentibus; petiolis 50—70 cm longis, utrinque breviter spinosis, raro inermibus; foliolis frondium crasse coriaceis, utrinsecus 56—80, 15—25 cm longis, circ. 1 cm latis, apice longe acuminatis, margine valde revolutis; macrosporophyllis utrinque dense ferrugineo-velutinis a speciebus ceteris manifeste diversa.

Guangxi, Guilin Botanical Garden, cultivated, introduced from Longzhou county, south-west of Guangxi, 22 June, 1994, Wei Fanan 1986; same locality, 31 Aug. 1994, Wei Fanan 2220 (Holotypus, fl. fem. IBK).

锈毛苏铁 *Cycas ferruginea* F. N. Wei

1. 羽状叶一段; 2—3. 羽片正、反面观; 4. 羽片横切面, 示边缘明显背卷; 5. 叶柄一段; 6. 大孢子叶及种子。 (何顺清绘)
